NEWS & TRENDS

RUBBER RHYZER PRO 45

The evolution of the JOOLA RHYZER series, now with 45 ° pink sponge.

MOVE

Shirt with absolute style factor. Comfortable fit and excellent workmanship for optimal freedom of movement.

ROSSI EMOTION PBO-c

Highest quality materials, elaborate design and a completely new feel through the interaction of the internal PBO-c fibers and Hinoki outer veneers.

WORLD CUP 25

Competition table with 25mm surface in the most modern coating technology for an even ball bounce.

SUPER ABS

Uniformly high ball bounce, stable flight behavior and excellent durability.

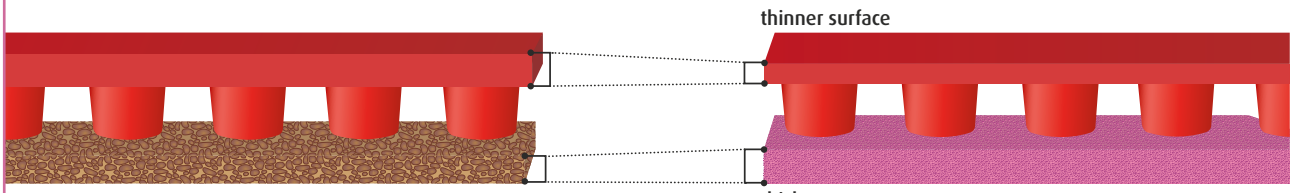
RHYZER

ARC
ADVANCED RUBBER CONSTRUCTION CONCEPT

Advanced Rubber Construction concept

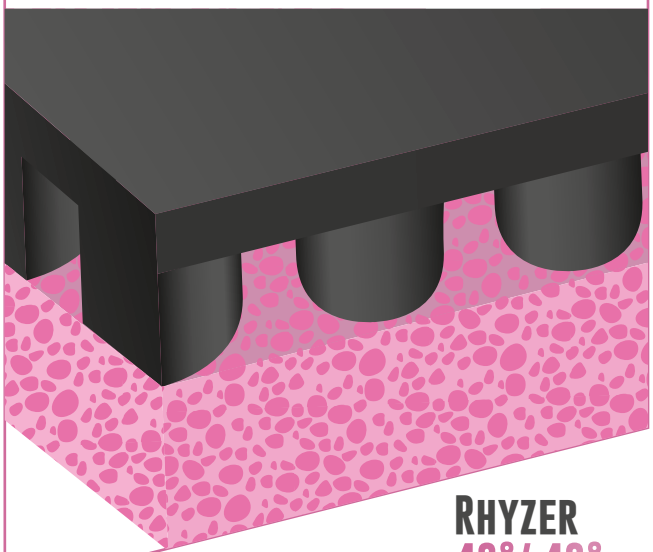
Due to the smaller layer thickness of the upper rubber, the Rhyzer series was able to be fitted with a thicker sponge underlay. This advanced geometry concept gives the JOOLA Rhyzer an extra dynamical upgrade.



STANDARD RUBBERS ***RHYZER SERIES***

PREMIUM-LINE

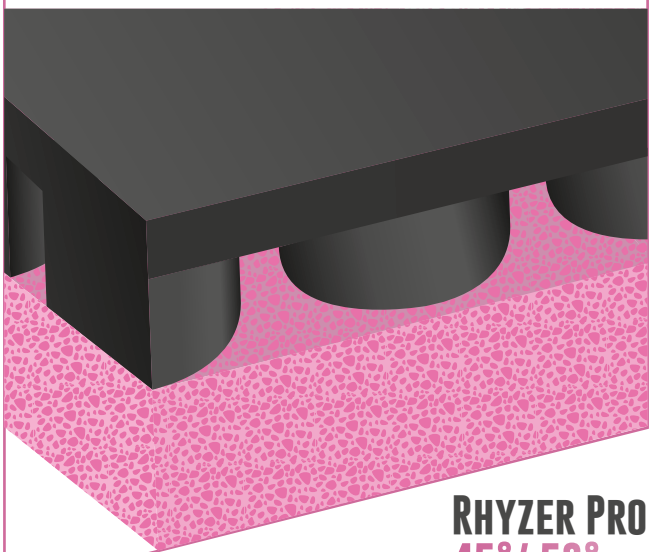
- narrow pimples, larger gaps between pimples
- extremely thin and grippy surface under high tension
- use of large pored 48/43° sponge (pink)
- in the Powermax version with a thicker sponge underlay



RHYZER
43° / 48°

PRO-LINE

- wider pimples, shorter gaps between pimples
- extremely thin and grippy surface under high tension
- use of mid-sized pored 50° sponge (pink)
- in the Powermax version with a thicker sponge underlay



RHYZER PRO
45° / 50°

SCS-DIAGRAMM

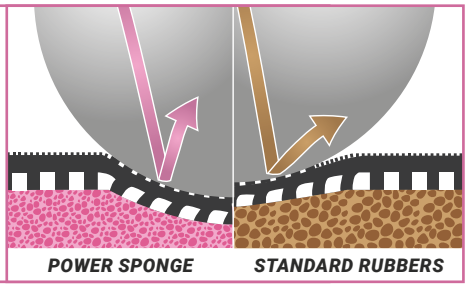
POWER SPONGE

Pink, highly elastic sponge to increase the dynamics (achieve higher catapult values) to optimize spin performance.



FLIGHT TRAJECTORY COMPARISON

PREMIUM-LINE

TENSOR DEVELOPED BY ESN · ARC ADVANCED RUBBER CONSTRUCTION CONCEPT · PS · Made in Germany

RHYZER 43

RHYZER 43 has a medium hard 43° sponge and excellently suits the spin oriented, multi-variant play close to the table and from half-distance. Despite the enormous speed it compensates shortcomings while hitting the ball. RHYZER 43 provides a rather soft stroke feeling and therefore guarantees very good feedback at an arched trajectory of the ball.

IN · 43° · SPEED FAST/EXTREME · SPIN EXTRA HIGH

2.0/ max. + **49,90 €**

TENSOR DEVELOPED BY ESN · ARC ADVANCED RUBBER CONSTRUCTION CONCEPT · PS · Made in Germany

RHYZER 48

RHYZER 48 has a 48° sponge and is on the highest level of development when speaking of speed, catapult and spin. It especially suits modern offensive players exasperating their opponents with fast topspin attacks close to the table and from half-distance. Compared to the RHYZER 43 the topspin trajectory is a little flatter and provides high precision and pressure, especially at offensive actions during the game.

IN · 48° · SPEED EXTREME · SPIN EXTRA HIGH

NEW

TENSOR DEVELOPED BY ESN · ARC ADVANCED RUBBER CONSTRUCTION CONCEPT · PS · Made in Germany

RHYZER PRO 45

The continuation of the RHYZER Pro series with 45° hard sponge can be described as fun to play and at the same time providing unique dynamics. The pimple geometry of the RHYZER Pro 45 has wider pimples being closer together and provides a lot of power with the dynamic medium pored pink sponge. Perfect for offensive players who prefer high spin and speed potential as well as pleasant touch. The RHYZER PRO 45 offers the complete package!

IN · 45° · SPEED FAST/EXTREME · SPIN EXTRA HIGH

RHYZER PRO 50

The further development of the JOOLA RHYZER series is the ideal rubber for players, who prefer a direct and dynamic playing feel. Just like it's predecessor, it has a very thin and extremely grippy surface, which is under enormous tension. However, the pimple geometry of the RHYZER Pro 50 differs radically. Wider built pimples, that are arranged in smaller distances from each other, in combination with the dynamic, pink coloured 50° sponge with mid-sized pores lead to maximum spin and speed performance. If a high technical basic level exists, the JOOLA RHYZER Pro 50 ignites the turbo!

Geo-Sponge POWER

Geo-Grip POWER

RHYZM-TECH

Another chapter in the success story of the popular Rhyzm rubber is written by the JOOLA RHYZM-TECH.
Due to modifications of the sponge, which has again been designed with considerably larger pores, a real catapult machine has been developed. The JOOLA RHYZM-TECH is a rubber that supports any rotation input in all situations and therefore gives all active topspin players an extra boost.
The JOOLA RHYZM-TECH is a challenge to overcome. Once this is managed, you can reach a new, significantly higher level.

1.8/ 2.0/ max. **51,90 €**

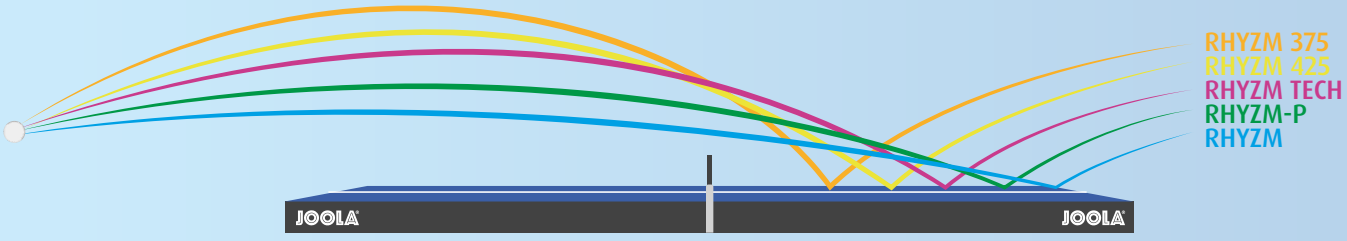
Geo-Grip POWER

RHYZM-P

RHYZM – on the market for few years and already almost a classic! The focus fell on development and improvement of the sponge up until now, whereas here a much improved rubber surface has been precisely worked upon. This has lead to the rubber having substantially more grip, with which not only more spin can be generated, but also better control and the durability is improved. Ideal also for use with the new Poly-ball.

2.0/ max. **49,90 €**

FLIGHT TRAJECTORY COMPARISON



RHYZM

Especially developed for the topspin player who plays an aggressive offensive game with extreme power, dynamics and rotation. The new, extremely grippy and spin elastic upper rubber combined with the 48° sponge provides rotation and piercing force as never before. Despite the sensational power, JOOLA RHYZM offers extreme control in passive play, whether in a short touch game over the table, chopping or offensive topspin game. At all times JOOLA RHYZM provides a new dimension of playing fun.
The JOOLA RHYZM brings rhythm to the game.

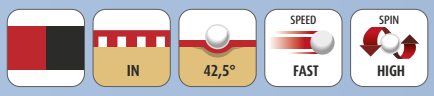
RHYZM 425

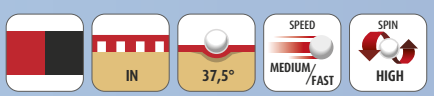
The JOOLA RHYZM 425 is the ideal compromise for all players that expect a best possible ball response, but at the same time cannot do without the power of an extremely hard sponge, as preferred by table tennis professionals. The speed and hardness of the JOOLA RHYZM 425 can be classified between the JOOLA RHYZM and the rather softer RHYZM 375. The advanced RHYZM surface guarantees full dynamics, extreme spin and fun when applying different spins. The RHYZM 425 unfolds it's full potential especially in topspin rallies. With this rubber you experience the exceptional "RHYZM feeling". Choose the RHYZM 425 and experience fun in playing like never before!



2.0/ max. **44,90 €**

RHYZM 375

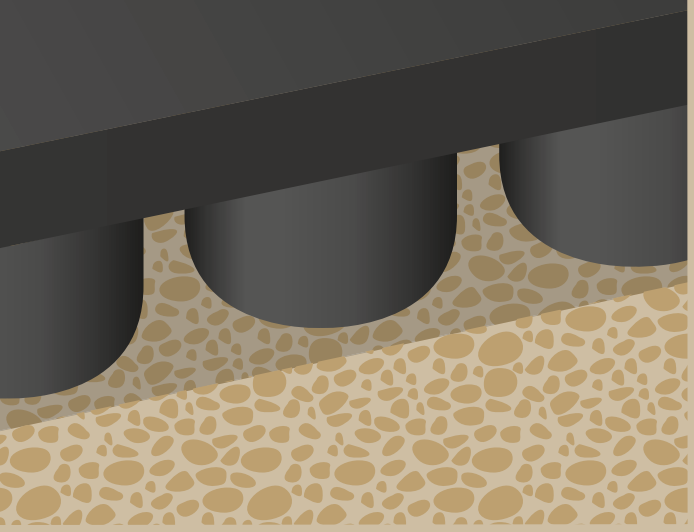
The advanced and grippy RHYZM surface combined with the soft large-pored sponge, provide a special "groove" at the table. It is an absolute top rubber for those players who can't do without the feeling and the sound of a soft sponge, and who prefer a rubber with a high ball flight when applying topspin to the ball. The ball contact time, extended by the soft sponge, provides precise ball response and highest control values in all playing situations. Especially when blocking, in counter duels or in return of service, the enhanced ball control is noticeable.



2.0/ max. **44,90 €**

Golden tango

- sticky upper rubber (sticky rubber technology) for maximum spin
- energetic, fine-pored Tensor sponge
- flat, direct trajectory



TENSOR DEVELOPED BY ESN

STICKY RUBBER TECHNOLOGY

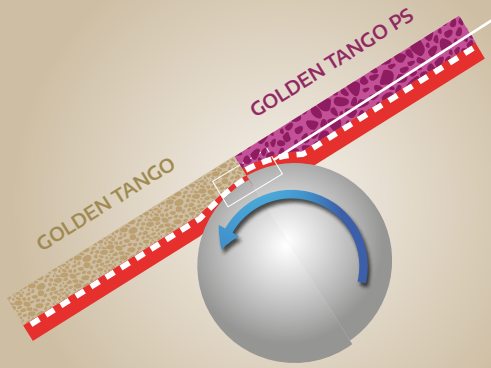
GOLDEN TANGO

The JOOLA GOLDEN TANGO is „made in Germany", combining the advantages of a tacky upper rubber, usually characteristic of Chinese rubbers, with the enormous elasticity and speed of a Tensor sponge.

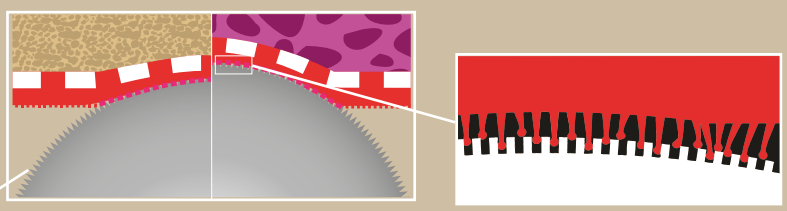
This interaction results in a completely new sensation. The tacky surface offers maximum grip thus enabling loaded topspin and undercut strokes at the most extreme blade angles. JOOLA GOLDEN TANGO produces incredible rotation and an arched trajectory. The molecular structure of the energetic sponge underlay makes JOOLA GOLDEN TANGO extremely elastic and provides sufficient speed reserves to counter unexpected spin attacks. The sponge is very forgiving, therefore it also offers maximum control for all cut variations either at the table or from half-distance.

1.8/ 2.0/ max. **44,90 €**

GOLDEN TANGO -
more rotation due to Sticky Rubber Technology



GOLDEN TANGO GOLDEN TANGO PS



When the ball hits the rubber surface this is also called „coupling" in modern table tennis. Coupling is favoured by the sticky surface of the JOOLA GOLDEN TANGO (Sticky Rubber Technology).

Especially at the most extreme topspin strokes slipping of the ball is prevented and the reliable grip of the ball is improved. The result is increased spin effect for all strokes.

Vertically positioned polymer strands at the surface of the GOLDEN TANGO (nanoscale) interlock with the surface structure of the ball and provide enlarged adhesive forces (stickiness).

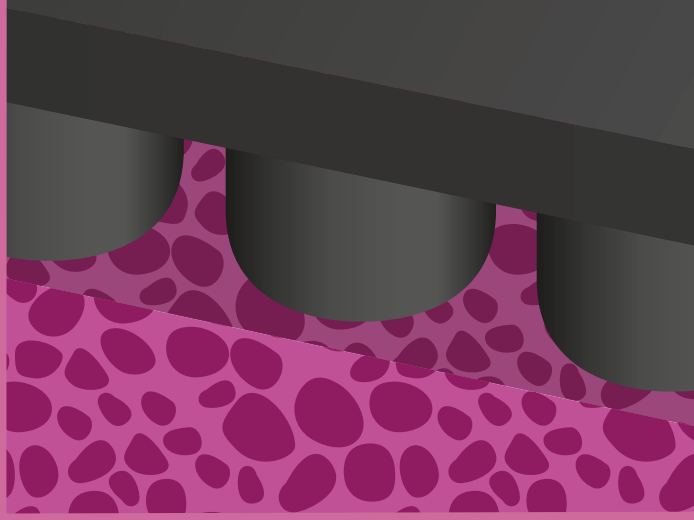
PS

TENSOR
DEVELOPED BY ESN

STICKY RUBBER TECHNOLOGY

Golden tango PS

- sticky upper rubber (sticky rubber technology) for maximum spin
- elastic, medium-pored sponge for high speed values
- high, arched trajectory



GOLDEN TANGO PS

The basic idea of applying a tacky upper surface to a rubber "made in Germany" and to combine this with a tensor sponge, has also been implemented in the development of the JOOLA GOLDEN TANGO PS. The Sticky Rubber Technology (SRT), that has already been successfully used for the GOLDEN TANGO, increases the spin values of all shots due to the excellent ball connection with the rubber surface. In order to add even higher catapult values to the rubber, the GOLDEN TANGO PS has been given a dynamic, middle-pored 50° sponge. On the one hand, the ball is therefore catapulted more highly away from the rubber, which particularly optimises the performance when playing topspin shots and on the other, the pink coloured sponge provides excellent feedback which gives additional control in difficult playing situations.

SAMBA TECH

MADE IN GERMANY

Latest rubber technology paired with a distinctive sound: Experience the Samba feeling at it's purest with the JOOLA SAMBA TECH.
This rubber is a great overall package. The soft, large pored 37.5° sponge ensures a prolonged ball contact and produces an excellent ball feedback. Great control values can be reached in passive, as well as in active game situations. At the same time, it has been possible to generate extra power for offensive play due to the newly devised rubber surface. An ideal mixture for all players who lay value on controlled offensive play.
The JOOLA SAMBA TECH offers pure playing enthusiasm with cutting edge technology!

1.8/2.0/max. **52,90 €**

SAMBA 27

MADE IN JAPAN

The JOOLA SAMBA 27, which can easily be recognised by it's red sponge, has been brought on to the market specifically developed for players who want to use the advantages of hard rubbers. The 48 degree version was able to positively convince particularly athletic topspin players, who were thrilled by the direct and exact power transmission from the rubber on the ball. The consequence: spin and speed can be precisely dosed and controlled – the placement accuracy is impressive!

1.8/2.0/max. **42,90 €**

SAMBA 19

MADE IN JAPAN

The 41 degree version of the newest SAMBA development offers an extremely balanced relationship of feedback with a soft sponge and acceleration in the active game. The very good to control own-catapult makes the JOOLA SAMBA 19 to a rubber, that not only forgives inaccuracies when carrying out a shot, but also corrects them.
Blue sponge, latest Japanese rubber technology with special factory tuning methods and a very good value for money are the trademarks of the new SAMBA version.

SAMBA PLUS

MADE IN GERMANY

Finally the big brother of the most played JOOLA rubber in recent decades is available. JOOLA classic now with incorporated speed gluing effect, that brings back the legendary SAMBA Sound into table tennis halls. The new SAMBA PLUS outshines all previous sound machines. Development and testing by a team of rubber developers, led by table tennis legend Jörg Rosskopf, has been a lengthy process but the new SAMBA PLUS is now ready for the market. The result is an optimum composition of feeling, speed and rotation with phenomenal sound and effect. The SAMBA PLUS sets new standards in development of soft rubbers with incorporated speed glue effect.

1.8/2.0/max. **44,90 €**

SAMBA

MADE IN JAPAN

Nothing sounds better! The most popular JOOLA rubber, due not only to its fantastic sound when speed glued but also because of its longevity, excellent spin and optimal feeling. For years players around the world have appreciated the combination of non-skidding upper rubber and the soft, super-elastic caoutchouc underlay. And for many players the SAMBA is still the ultimate because of its spin features.

1.8/2.0/max. **32,90 €**

ZACK

MADE IN GERMANY

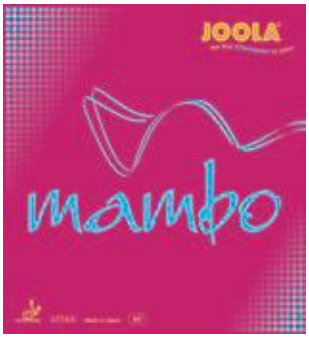
With the rubber ZACK, JOOLA introduces a classic rubber made in Germany onto the market, designed specifically for all players who wish to do without an extreme catapult effect and extreme speed. Therefore it is a high-quality, allround rubber, characterized by good control, placement accuracy and rotation tolerance. Outstanding durability and an extremely good value for money make the JOOLA ZACK a rubber that enthusiasts of classic rubbers, produced with the most modern German technology, cannot afford to miss.

1.9/max. **29,90 €**

MAMBO

MADE IN JAPAN

JOOLA MAMBO is manufactured in Japan using a revolutionary technology: The proportion of chemical packing material in the sponge and in the upper rubber are increased to the maximum permitted levels. This technique has a positive influence on the feeling of the ball and the sound without losing flexibility and speed. The result is a super-flexible and perfect rubber.

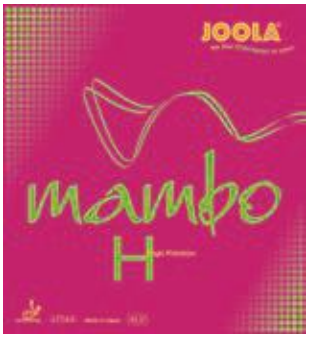


1.8/2.0/max. **32,90 €**

MAMBO H

MADE IN JAPAN

JOOLA MAMBO H is a high technology High Friction rubber. The sponge is slightly harder than that of conventional Mambo. With a special gluing technique the upper rubber, which is already designed for extreme tension, is then combined with the sponge. This results in an unbelievable natural energy. This, in combination with the extreme grippy upper rubber surface, makes it a rubber with a lot of spin.

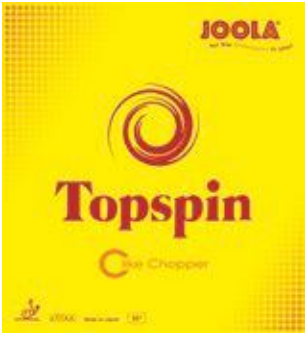


1.8/2.0/max. **32,90 €**

TOPSPIN C

MADE IN JAPAN

The TOPSPIN C uses the surface of our old Topspin rubber. The secret of this unique rubber lies in the composition of the sponge. This combination of highly grippy upper rubber with a special sponge results in a defensive rubber for perfectly safe defensive play, extreme variations in chop, and superb response to the opponent's topspin.



1.2/1.5/1.8/2.0 **34,90 €**

AXXESS

MADE IN GERMANY

JOOLA AXXESS is perfectly designed to meet the requirements of ambitious beginners. The soft (37.5°), small porous sponge in combination with narrow pimples give the player excellent ball feedback and allround flexibility. The advantages of the JOOLA AXXESS come into full effect when learning specific stroke techniques or when ball control is of vital importance. The extremely grippy and elastic upper rubber also allows strokes with tremendous spin that will trouble any opponent.

1.6-1.8/1.9-2.1 **24,90 €**

UPP

MADE IN CHINA

New well-priced JOOLA rubber that meets high demands. The medium hard, green sponge combined with the extremely grippy surface provides excellent "speed feeling" and also suits the player that needs full power far away from the table. JOOLA UPP is not for beginners but an alternative for players who request an adequate and top modern competition rubber at an attractive price!

1.6/1.9/max. **19,90 €**

4 YOU

MADE IN ESTONIA

The logical answer, to offer a low-priced rubber for the player with a low budget. Don't be fooled by the price, this is not a rubber for beginners, but an offensive allround rubber of the best Japanese quality – ideal for the controlled offensive player. The rubbers are ideal in combination with the blades ROSSKOPF ALLROUND or EAGLE MEDIUM. Amazing value for money.

1.5/1.8/2.0 **14,90 €**

4 ALL

MADE IN ESTONIA

The 4 ALL offers slightly more control than the 4 YOU. The 4 all is a classic allround rubber, which is excellent for the developing player. The 4 ALL rubber provides excellent control and is still fast and dynamic, so that all basic strokes can be played without effort.

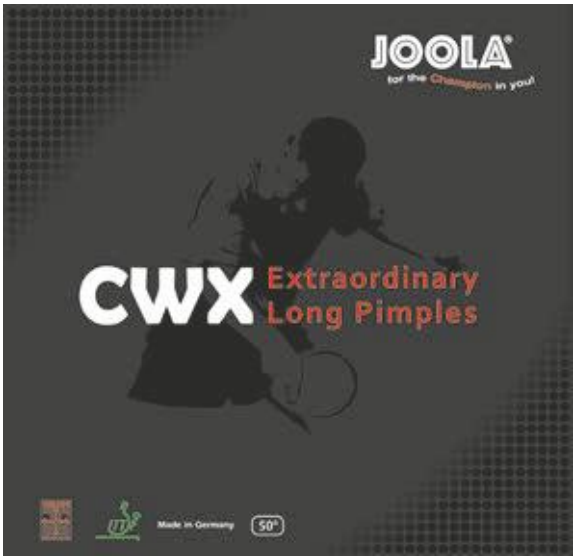
1.5/1.8 **12,90 €**

CWX

MADE IN GERMANY

To be a successful defender nowadays it is extremely important to constantly refine all playing components. Cutting defence from half distance is not the only priority any more. Moreover, a defensive player has to be flexible. This requires pimple rubbers that enable such playing characteristics.
Therefore our goal was to develop a long pimple rubber, together with our longterm partner defending ace Chen Weixing, that meets all the requirements of modern defensive play. The result of these efforts is the JOOLA CWX. The pink coloured (50°) sponge with integrated Tensor technology offers enormous opportunities for undercut strokes away from the table, whilst retaining control for disturbing shots close to the table due to the sponge hardness and flat trajectory. The grippy micro structure of the pimple heads and the flexibility of the narrow pimples also allows extreme chop defence with maximum control.

0X/0.5/0.9 **42,90 €**



PS

EXPRESS ULTRA

MADE IN GERMANY

Speed gluing became popular with short pimple players a long time ago. The time is now right to introduce EXPRESS ULTRA, the pimples out version with incorporated speed glue effect – the short pimple designed for professionals and ambitious offensive players.

2.0/max. **44,90 €**

TENSOR DEVELOPED BY ESN

TANGO ULTRA

MADE IN GERMANY

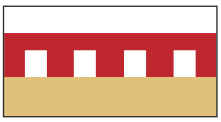
A short pimpled rubber using the TENSOR effect and the result is not surprising: softer, more control and more spin but also with dramatic effects from the pimples. For passive blocking, TENSOR absorbs the energy but for active blocking and attack the rubber really explodes.

2.0/max. **42,90 €**

TABLE TENNIS RUBBERS DIFFER AS FOLLOWS

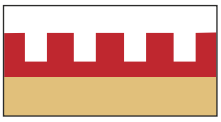
JOOLA has made the decision to cease using the old numerical system of rubber rating. We believe that our new classification system is easier to understand and that an exact classification into very precise ratings is impossible and highly subjective.

We will keep the traditional categories of playing features, but classification now has only 4 levels:



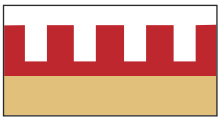
PIMPLES IN

THE „standard" rubber. Combination of upper rubber (pimples pointing inward) and sponge, available in thicknesses of 1.0 – 2.3 mm.



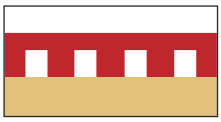
SHORT PIMPLES

Rubber with pimples upper rubber (pimples pointing outward). Short pimples are especially used for blocking and counter play.



LONG PIMPLES

Available without sponge (ox) or with different sponge thicknesses. Long pimples are for blocking/disturbing game at the table as well as chopping from half distance.



ANTI-SPIN

Combination from plain upper rubber and sponge. The plain surface facilitates returning of balls with a lot of rotation (service, spin).

SPONGE

Rubbers are available with different sponge thickness from ox – 2,2.
The thicker the sponge the faster the rubber.

RUBBER TECHNOLOGIES

GREEN POWER
Performance achieved from fresh gluing is permanently incorporated into the rubber.

TENSOR
Incorporated inner tension in the sponge and upper rubber. More elasticity, more spin, more speed and more feeling.

GEO-FORCE POWER
Newly designed pimple arrangement with a more hollow space between the single pimples provides maximum spin and best possible control.

GEO-SPONGE POWER
Innovative macropore sponge design that increases the catapult effect therefore enabling higher ball trajectories.

GEO-GRIP POWER
This develops significantly more grip of the ball for more spin due to an intense friction surface structure.

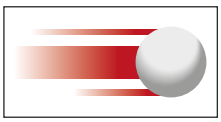
SRT (STICKY RUBBER TECHNOLOGY)
The innovative technology gives stickiness to the rubber. Improved adhesive force at the moment of contact provides extreme spin, therefore avoiding slipping of the ball.

ARC (ADVANCED RUBBER CONSTRUCTION CONCEPT)
More dynamic due to the use of a thinner upper rubber surface and a thicker sponge underlay.

POWER SPONGE
Pink, highly elastic sponge to increase the dynamics (achieve higher catapult values) to optimize spin performance.

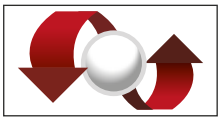
THE PLAYING FEATURE CATEGORIES

In general JOOLA differentiate four categories of playing features, each illustrated by an App.



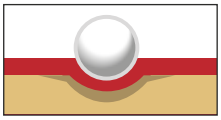
SPEED
(LOW, MEDIUM, FAST, EXTREME)

Defines speed of the ball when catapulted from the player's racket. The higher the speed of the blade the higher the ball bounce. For beginners we recommend rackets with less speed.



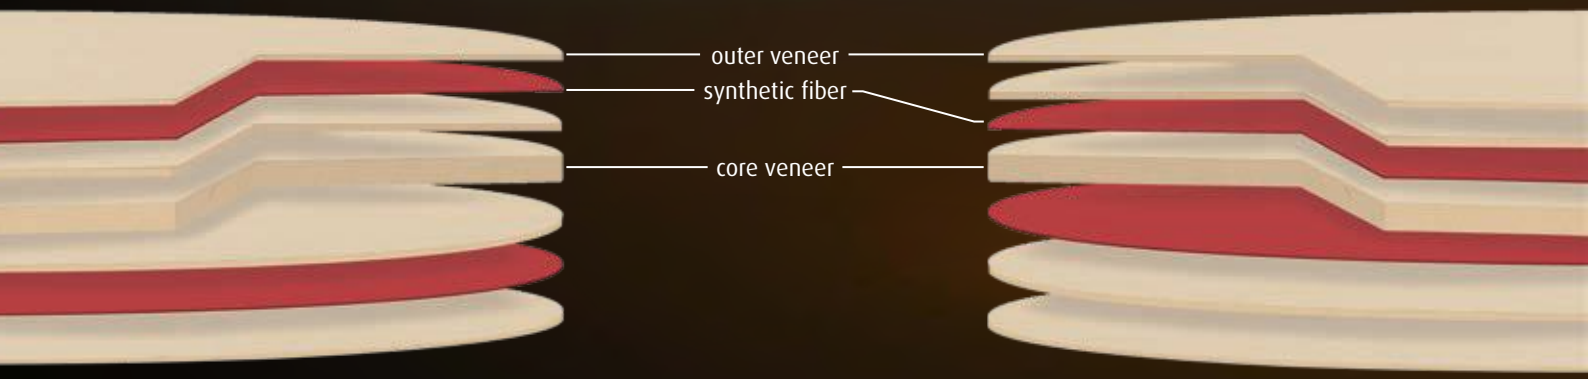
SPIN
(LOW, MEDIUM, HIGH, EXTRA HIGH)

Defines rotation produces by hitting the ball. The higher the grip of a rubber the more rotation can be given to the ball by touching.



HARDNESS

In addition the rubbers are classified accordig to the hardness of the sponge (degree). The harder the rubber the more speed. The softer the rubber the more sensitive and controlled.



OUTER LAYER (OL):

The synthetic fibre is located directly under the outer veneer and provides direct touch at flat trajectory and high speed.

INNER LAYER (IL):

The synthetic fibre are not located under the face veneer but on the core veneer. This provides softer touch and more control at still present stiffness.

ROSSI EMOTION PBO-c

PBO-c fibres
in detailed view

ROSSI EMOTION PBO-c

The very popular and already considered to be classic JOOLA ROSSKOPF EMOTION served as basis for the development of the ROSSKOPF EMOTION PBO-c. Jörg Rosskopf, JOOLA legend and national men's coach, again was involved in the product development. Especially when working out smallest nuances, the experience and enormous knowledge of materials were a decisive factor on the way to the final product.
The 7-ply ROSSKOPF EMOTION PBO-c is fitted with the very popular JOOLA premium synthetic fibre PBO-c, directly positioned on the inner layer. Compared to the classic ROSSI EMOTION, the PBO-c veneer, for the first time located on the inside, provides significantly more speed and dynamic at highest precision. The high-quality Hinoki outer veneers combine fantastic touch with a considerably prolonged ball contact time.
The interplay of the inner PBO-c fibres and the Hinoki outer veneers the EMOTION PBO-c obtains a completely new playing feel: maximum energy transfer from the inside and extraordinary controlled touch from the outside of the blade.
Using high-quality materials, elaborate design and excellent workmanship make the ROSSI EMOTION PBO-c an exciting experience.

Extremely tear-proof and elastic high tech fibre for unique playing features. Sensitive touch, outstanding spin dynamics.

HTP
HINOKI TECHNOLOGY PERFORMANCE

Wood veneer of very high quality convinces with following features: sensitive, prolonged ball contact, high trajectory and maximum ball control.

JÖRG ROSSKOPF...

... on the development of blade production in recent years:

In the past you played mostly with the so-called solid wood bats. Specific technologies were less important here. Today, manufacturers are much more meticulous about innovation in terms of development. Blades are not just „play equipment", they are an expression of individuality and can therefore also be seen as a „statement". Especially in terms of technology & design, the expectations of today's TT players have increased immensely.

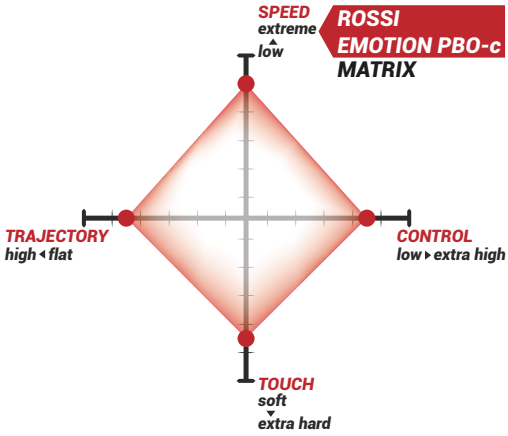
... on the major innovations in the technology sector:

After developing the blade classic Rossi Emotion, I was involved in the creation of the latest premium blade, the Rossi Emotion PBO-c. Crucial innovation of this blade is the processing of high-quality PBO fibre interwoven with carbon fibres (PBO-c). In some tests we have found that this PBO-c compound leads to a softer touch feeling with maximum dynamics. Many JOOLA players are excited about the new technology. Daniel Habesohn (Energon Super PBO-c) and Petrissa Solja (Nobilis PBO-C) have already achieved great success with their new blades in the recent past.

... on the difference between the classic Emotion and the new Emotion PBO-c:

The aim of the development was to design an offensive blade from the beginning, which is basically based on the popular Rossi Emotion veneer composition. Due to my work as a national coach and the constant exchange with players, I was able to determine early on with the introduction of the plastic ball that the new ball led to a reduction in speed and rotation. So my approach to developing the Rossi Emotion PBO-C was to compensate for this disadvantage. Two main factors are leading the way in this direction: The extremely dynamic PBO-c fibre and the use of thick, very high-quality, soft Kiso Hinoki exterior veneers.

JÖRG ROSSKOPF
„Mr. Tischtennis"



INNER LAYER (IL)

The synthetic fibre are not located under the face veneer but on the core veneer. This provides softer touch and more control at still present stiffness.

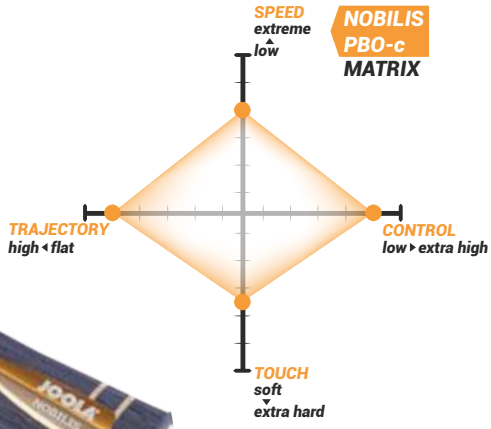
HP HINOKI TECHNOLOGY PERFORMANCE HINOKI



NOBILIS PBO-c

The new JOOLA NOBILIS: The name says it all!
Only the most precious and high-quality materials are used for this blade. The design and excellent workmanship in every detail speak for themselves.
The structure of the single veneers and layers make the JOOLA NOBILIS special: the PBO-c fibres are directly placed on the kiri core veneer. The 1.2mm hard Hinoki outer veneers give the blade a prolonged ball contact time in addition to the traditionally good playing feel and allow the most extreme spin ball at high trajectory. This construction gives the blade stability, elasticity and a lot of force, enabling very precise play even at high speed. The interaction of the individual components make the JOOLA NOBILIS PBO an offensive blade that is more than just fast: balanced, good spin, precise with pure feeling.
The JOOLA NOBILIS PBO - in its own class!

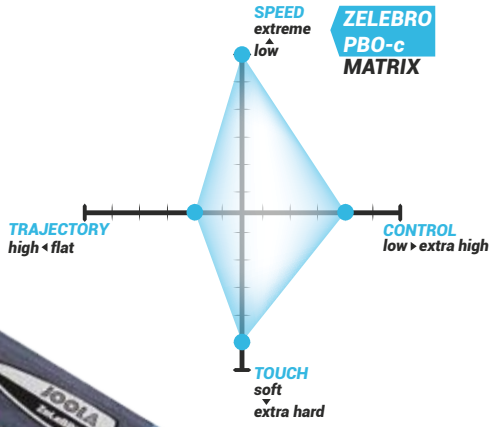
PBO-c CARBON

OL



ZELEBRO PBO-c

The new JOOLA ZELEBRO PBO is an absolutely top class blade, only the best materials are used. This 7-ply offensive miracle develops explosive and direct power without losing control.
The centrepiece of the sensitive JOOLA ZELEBRO PBO-c is the synthetic PBO Poly(p-phenylen-2,6-benzobisoxazol) fibres, plain woven with the carbon bundles, directly positioned under the Limba upper veneer. This causes an enlarged sweet spot, a lot of dynamics and a medium hard stroke at flat trajectory due to the interaction of the ratio of natural woods (Limba, kiri, koto) and the PBO carbon fibre fabric. The vibration dampening effect of the PBO-c compound and the even ball bounce are ideal for all players preferring direct offense and precise positioning.
This blade is an asset in every playing situation which is exactly what players expect from a blade!

PBO-c fibres in detailed view

PBO-c - HIGH TECH FIBRES

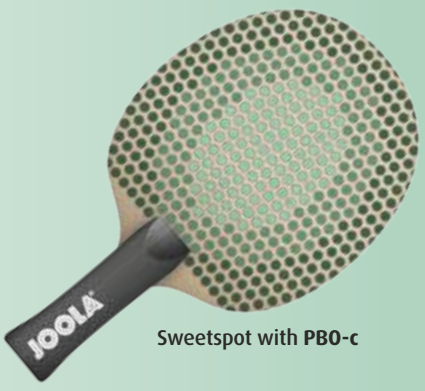
for unique playing features

Tear resistant and high elasticity are the outstanding features of the PBO fibre. Poly(p-phenylen-2,6-benzobisoxazol (PBO)) is a synthetic Polymer which is also used in formula 1 cars and aeronautics because of its unique characteristics.

In tests it was established that the interweaving of the PBO fibre bundles with the carbon fibres (in chessboard pattern) provide unique playing features for table tennis blades.

On the one hand the blade gains stability through the combination with the PBO-c fabric, and on the other, the elastic PBO fibre and the slightly harder carbon fibre result in a softer stroke feeling. This ideally suits a spin dynamic but controlled offensive play. The enlarged sweet spot also guarantees an even bounce and therefore reduces the error rate.

Our new blades JOOLA **"Nobilis PBO-c"** and JOOLA **"Zelebro PBO-c"** and JOOLA **„ROSSI** show how the PBO fibre in combination with proven carbon refine a table tennis blade and make it something absolutely unique.



Sweetspot with **PBO-c**

SUPER PBO-c

The popular playing characteristics of the PBO-c blades have prompted the JOOLA development team, supported by the know-how of "World Coach 2017" and JOOLA partner Jörg Rosskopf, to look for ways of improving the playing characteristics of these valuable blades even more. The result of these efforts is the new JOOLA **"Energon Super PBO-c"**. Due to a new processing technology, an improved connection between the PBO and the firstly used **1K-carbon fibres** has been reached. As well as the reduction in weight, the optimised interweaving of both synthetic fibres leads to an **enlargement of the sweetspot** (even ball ejection almost up to the edge of the racket) and to maximum ball response with as much explosiveness as possible.

Sweetspot with Super **PBO-c**

thin, very soft Koto face veneer

super PBO-c fibre (connection PBO and 1K carbon) directly under the face veneer

medium-hard, fast Limba veneer

medium-fast, very soft Kiri core veneer from Asia for an excellent ball response

Super PBO-c fibres in detailed view

SUPER PBO-c

Optimised connection of the "PBO synthetic fibres" and carbon. Leads to maximum ball response, highest possible explosiveness and an enlarged sweet spot..

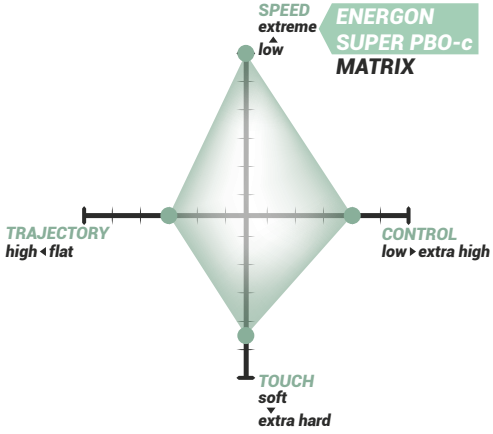
OUTER LAYER (OL)

The synthetic fibre is located directly under the outer veneer and provides direct touch at flat trajectory and high speed.

ENERGON SUPER PBO-c

The choice of the DOUBLE EUROPEAN CHAMPION 2018 and EUROPE TOP 12 FOURTH PLACE in 2019

DANIEL HABESOHN



ENERGON SUPER PBO-c

Result of the most recent technical developments in the manufacturing of blades:
JOOLA ENERGON SUPER PBO-c.
Due to an optimised treatment of the deployed synthetic fibres, an even finer texture and a more stable connection was able to be established. The extraordinary light SUPER PBO-Texture (p-phenylene—benzobisoxazole) is closely interwoven with 1k-carbon fibre threads in a criss-cross pattern and lies directly under the thin outer veneer. As a result of this the Sweetspot is enlarged, which enables an even ball ejection almost right up to the edge of the racket face. In addition to a very high playing feel and a medium-hard impact, this gives the blade an incomparable dynamic and explosiveness, without seeming to be uncontrolled. The JOOLA ENERGON SUPER PBO-c is astonishingly mistake-forgiving, despite highest speed attributes. The complex design, the use of high-quality materials and the excellent finishing make the JOOLA ENERGON PBO-c an absolute high-class product. Optically and when being played extraordinary and therefore a „must have" for every player.

PPA-c

Aramid fibres (Poly(m-phenylenisophthalamid) are interwoven with Carbon fibres. The application of Aramid fibres lead to increased stability and reduction of vibration at ball contact. The combination of these synthetic fibres enhance dynamic and therefore speed of the blade.

MATTENET OFF

The Mattenet OFF is customized for players like Adrien Mattenet. In intensive co-operation with the French exceptional talent, a blade has been developed that optimally supports creativity, playing pleasure and power of his game. The construction of the blade is typical: the innovative PBA-c fabric, jacketed by soft, sensitive blade veneers provide a lot of spin and speed potential. The combination of Aramid and Carbon are characterized by excellent balance of elasticity and high specific stability – ideal for Adrien's feared, both-sided topspin from half distance. The Kiri core stands for good control values.

A mixture that is perfect for the enthusiastic offensive player!

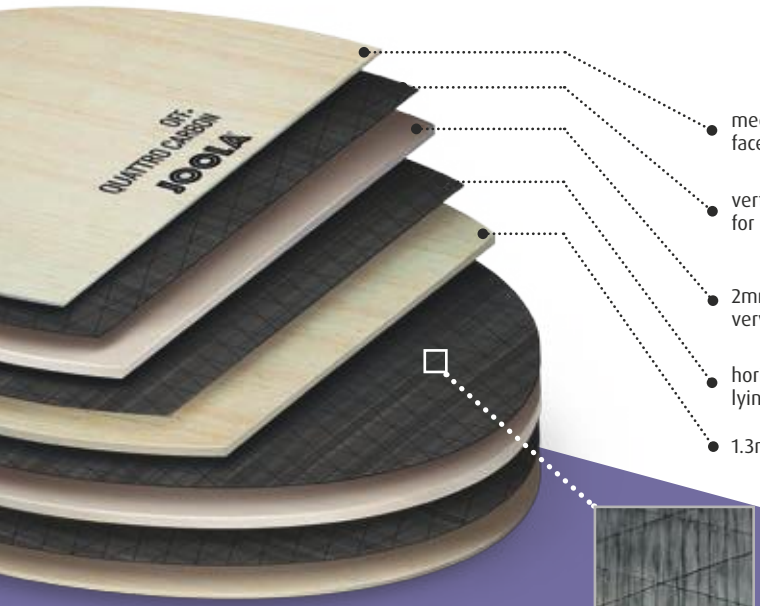
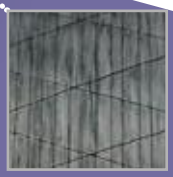
UDC – UNIDIRECTIONAL CARBON CONCEPT

Unidirectional (parallel) to each other placed carbon fibres, that are not interwoven with each other.
For highest speed, even ball ejection and higher stability.



- medium-hard, fast and extremely stable Limba face veneer
- vertically placed UD-carbon fibres under the face veneer for highest speed values and highest stiffness
- 2mm thick, extremely soft and very light balsa layer
- horizontally placed UD-carbon fibres lying on the core veneer
- 1.3mm thick Samba core veneer



UD-carbon fibres in detailed view

QUATTRO CARBON

The JOOLA QUATTRO CARBON is the innovative result of two specially coordinated components: Five selected wood veneers harmonise excellently with 4 UD-carbon fibres and generate impressive playing characteristics.
The 4 UD-carbon fibres are unidirectional, which means that they are placed parallel to each other, without being interwoven. This gives the JOOLA QUATTRO CARBON the highest speed attributes and direct playing characteristics, which is ideal for a risk-orientated offensive game at the limit. The horizontal course of the inner and the contrasting vertical course of the outer UD-carbon fibres cause an even, controlled ball ejection and add stability. The core of the fast JOOLA QUATTRO CARBON is the soft Samba veneer. Together with the very light and also soft balsa layers, which lie on the inner UD-fibres, this gives the blade more feeling when hitting the ball and a lot of control. This hybrid combination out of hard synthetic fibres and soft wood veneers make the QUATTRO CARBON a perfect choice for players, who are looking for highest speed and stability combined with a good measure of control.

The VIVA is a remodel of the legendary VIVA blade. The 7 layer blade offers excellent balance, which is the basis for the extraordinary spin features. The VIVA is a proven top offensive blade at an unbeatable price.

7 ply **44,90 €**

SPEED FAST | TOUCH MEDIUM+

Blade Size LxW: 159x146 mm | **Thickness:** 6,6 mm

Handle LxHxW | **FL:** 101x25x34 | **ST:** 101x23x27

WING MEDIUM

WSI technology (Wing Shaft Integration) provides a totally new feel. The handle is integrated into the blade like a wing thus providing excellent stability. The layers of precious Hinoki are aerodynamically shaped into the handle so that the grip fits perfectly in the hand. The combination of veneers provides well-balanced playing features and is ideal for players with a lot of spin and a precise blocking game.

5 ply **49,90 €**

SPEED MEDIUM | TOUCH MEDIUM-

Blade Size LxW: 155x152 mm | **Thickness:** 6,2 mm

Handle LxHxW | **FL:** 103x25x36 | **ST:** 101x23x29

WSI ***(WING-SHAFT-INTEGRATION TECHNOLOGY)***

The JOOLA blade innovation with Wing-Shaft-Integration Technology Wing-shaped handle reinforcement.

CHEN DEFENDER

For some time, the Chen Weixing Defensive blade has been one of the most popular defensive blades. Working with the world class defensive player from Austria, we have developed another blade designed for extreme defensive players. The CHEN DEFENDER is an oversize blade with considerably more control. The Enzo glue layer between two Samba veneers provides greater control and tremendous feel of the ball.

7 ply **49,90 €**

SPEED LOW | TOUCH SOFT+

Blade Size LxW: 169x162 mm | **Thickness:** 7,5 mm
Handle LxHxW | **ST:** 101x23x28

CHEN WEIXING

Designed by Europe's best defensive player, it is best suited to a variable and controlled chop defensive game. However, fast topspin shots, as played by Chen Weixing, are also possible without any problem. The layers of black-cloth in the construction provide increased control.

7 ply **44,90 €**

SPEED MEDIUM | TOUCH SOFT

Blade Size LxW: 165x159 mm | **Thickness:** 5,9 mm
Handle LxHxW | **FL:** 103x25x36 | **ST:** 103x23x29

CHEN JUNIOR

Chen Weixing has applied the knowledge gained from training with young Chinese players. It is well-balanced for a child's hand. Ideal relation of speed and control for learning basic strokes.

5 ply **19,90 €**

SPEED MEDIUM | TOUCH SOFT

Blade Size LxW: 152x142 mm | **Thickness:** 6,8 mm
Handle LxHxW | **JUNIOR:** 90x24x29

TONI HOLD WHITE SPOT

The defensive classic blade! Specially suitable for anti-top rubbers. The cottonwood veneers are extremely soft and very slow providing great control.

5 ply **44,90 €**

SPEED LOW | TOUCH EXTRA SOFT

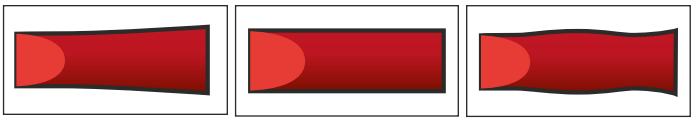
Blade Size LxW: 163x155 mm | **Thickness:** 5,7 mm
Handle LxHxW | **ST:** 101x24x27

BLADE FEATURES

JOOLA has made the decision to cease using the old numerical system of blade rating according to values of 0-100 or even more. We believe that our new classification system is easier to understand and that an exact classification into very precise ratings is impossible and highly subjective. The most relevant features of JOOLA blades are illustrated as APPs.

VENEERS

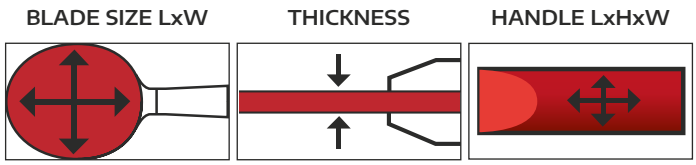
JOOLA blades consist of 5, 7 or 9 veneers.



FLARED STRAIGHT ANATOMIC

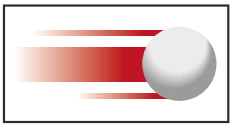
HANDLE SHAPES

Within our product range we distinguish between three different handle shapes:
Flared, Straight and Anatomic.



HANDLE AND BLADE DIMENSIONS

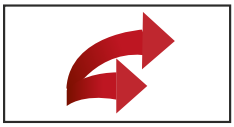
As there are considerable differences with regard to handle/blade dimensions, we attach the corresponding values to our blade pages. They should give the idea of actual blade dimensions. To simplify, these values are illustrated as Apps. However, there might be minimal deviations due to production.



SPEED

(LOW, MEDIUM, FAST, EXTREME)

Defines speed of the ball when catapulted from the player's racket. The higher the speed of the blade the higher the ball bounce. For beginners we recommend rackets with less speed.



TOUCH

The term „Touch" is used for classification of response (extra soft, soft, medium, hard, extra hard) when the ball hits the blade.

The harder the touch (e.g. extra hard) the flatter the ball trajectory.
The softer the touch (e.g. extra soft) the higher the ball trajectory.

RUBBER TECHNOLOGIES

CARBON
The classic among the used fibres. Increased the sweet spot, reduced vibration.

Inner Layer (IL)
The synthetic fibre is not located under the face veneer but on the core veneer. This provides softer touch and more control at still present stiffness.

Outer Layer (OL)
The synthetic fibre is located directly under the outer veneer and provides direct touch at flat trajectory and high speed.

RAG
Round-About-Grip – JOOLA exclusive! The veneers are block glued, and afterwards cut across and glued again.

FLOW GLUE
Glue used in aeroplane construction provides an extremely hard, almost vibration free blade.

JUNIOR BLADE
Blades especially designed for a child's hand, with smaller blade and shorter handle.

PPA-c
Aramid fibres (Poly(m-phenylenisophthalamid) are interwoven with Carbon fibres. The application of Aramid fibres lead to increased stability and reduction of vibration at ball contact. The combination of these synthetic fibres enhance dynamic and therefore speed of the blade.

BURNtec
Almost warp-free blade with moisture removed.

FIBRE
Specially refined VV fibre for highest stability and enlarged sweet spot.

Balsa
Soft power with extra feeling at lowest weight!

WSI (Wing-Shaft-Integration Technology)
The JOOLA blade innovation with Wing-Shaft-Integration Technology Wing-shaped handle reinforcement.

Candle Nut
Soft candlenut wood, excellently suitable as core veneer optimizing ball feedback and therefore increasing control.

Texalium
Aluminium coated fibreglass fabric, large sweet spot, good acceleration.

PBO-c
Extremely tear-proof and elastic high tech fibre for unique playing features. Sensitive touch, outstanding spin dynamics.

meliorate CARBON
Very hard and expensive carbon material. Large sweet spot, unrivalled control.

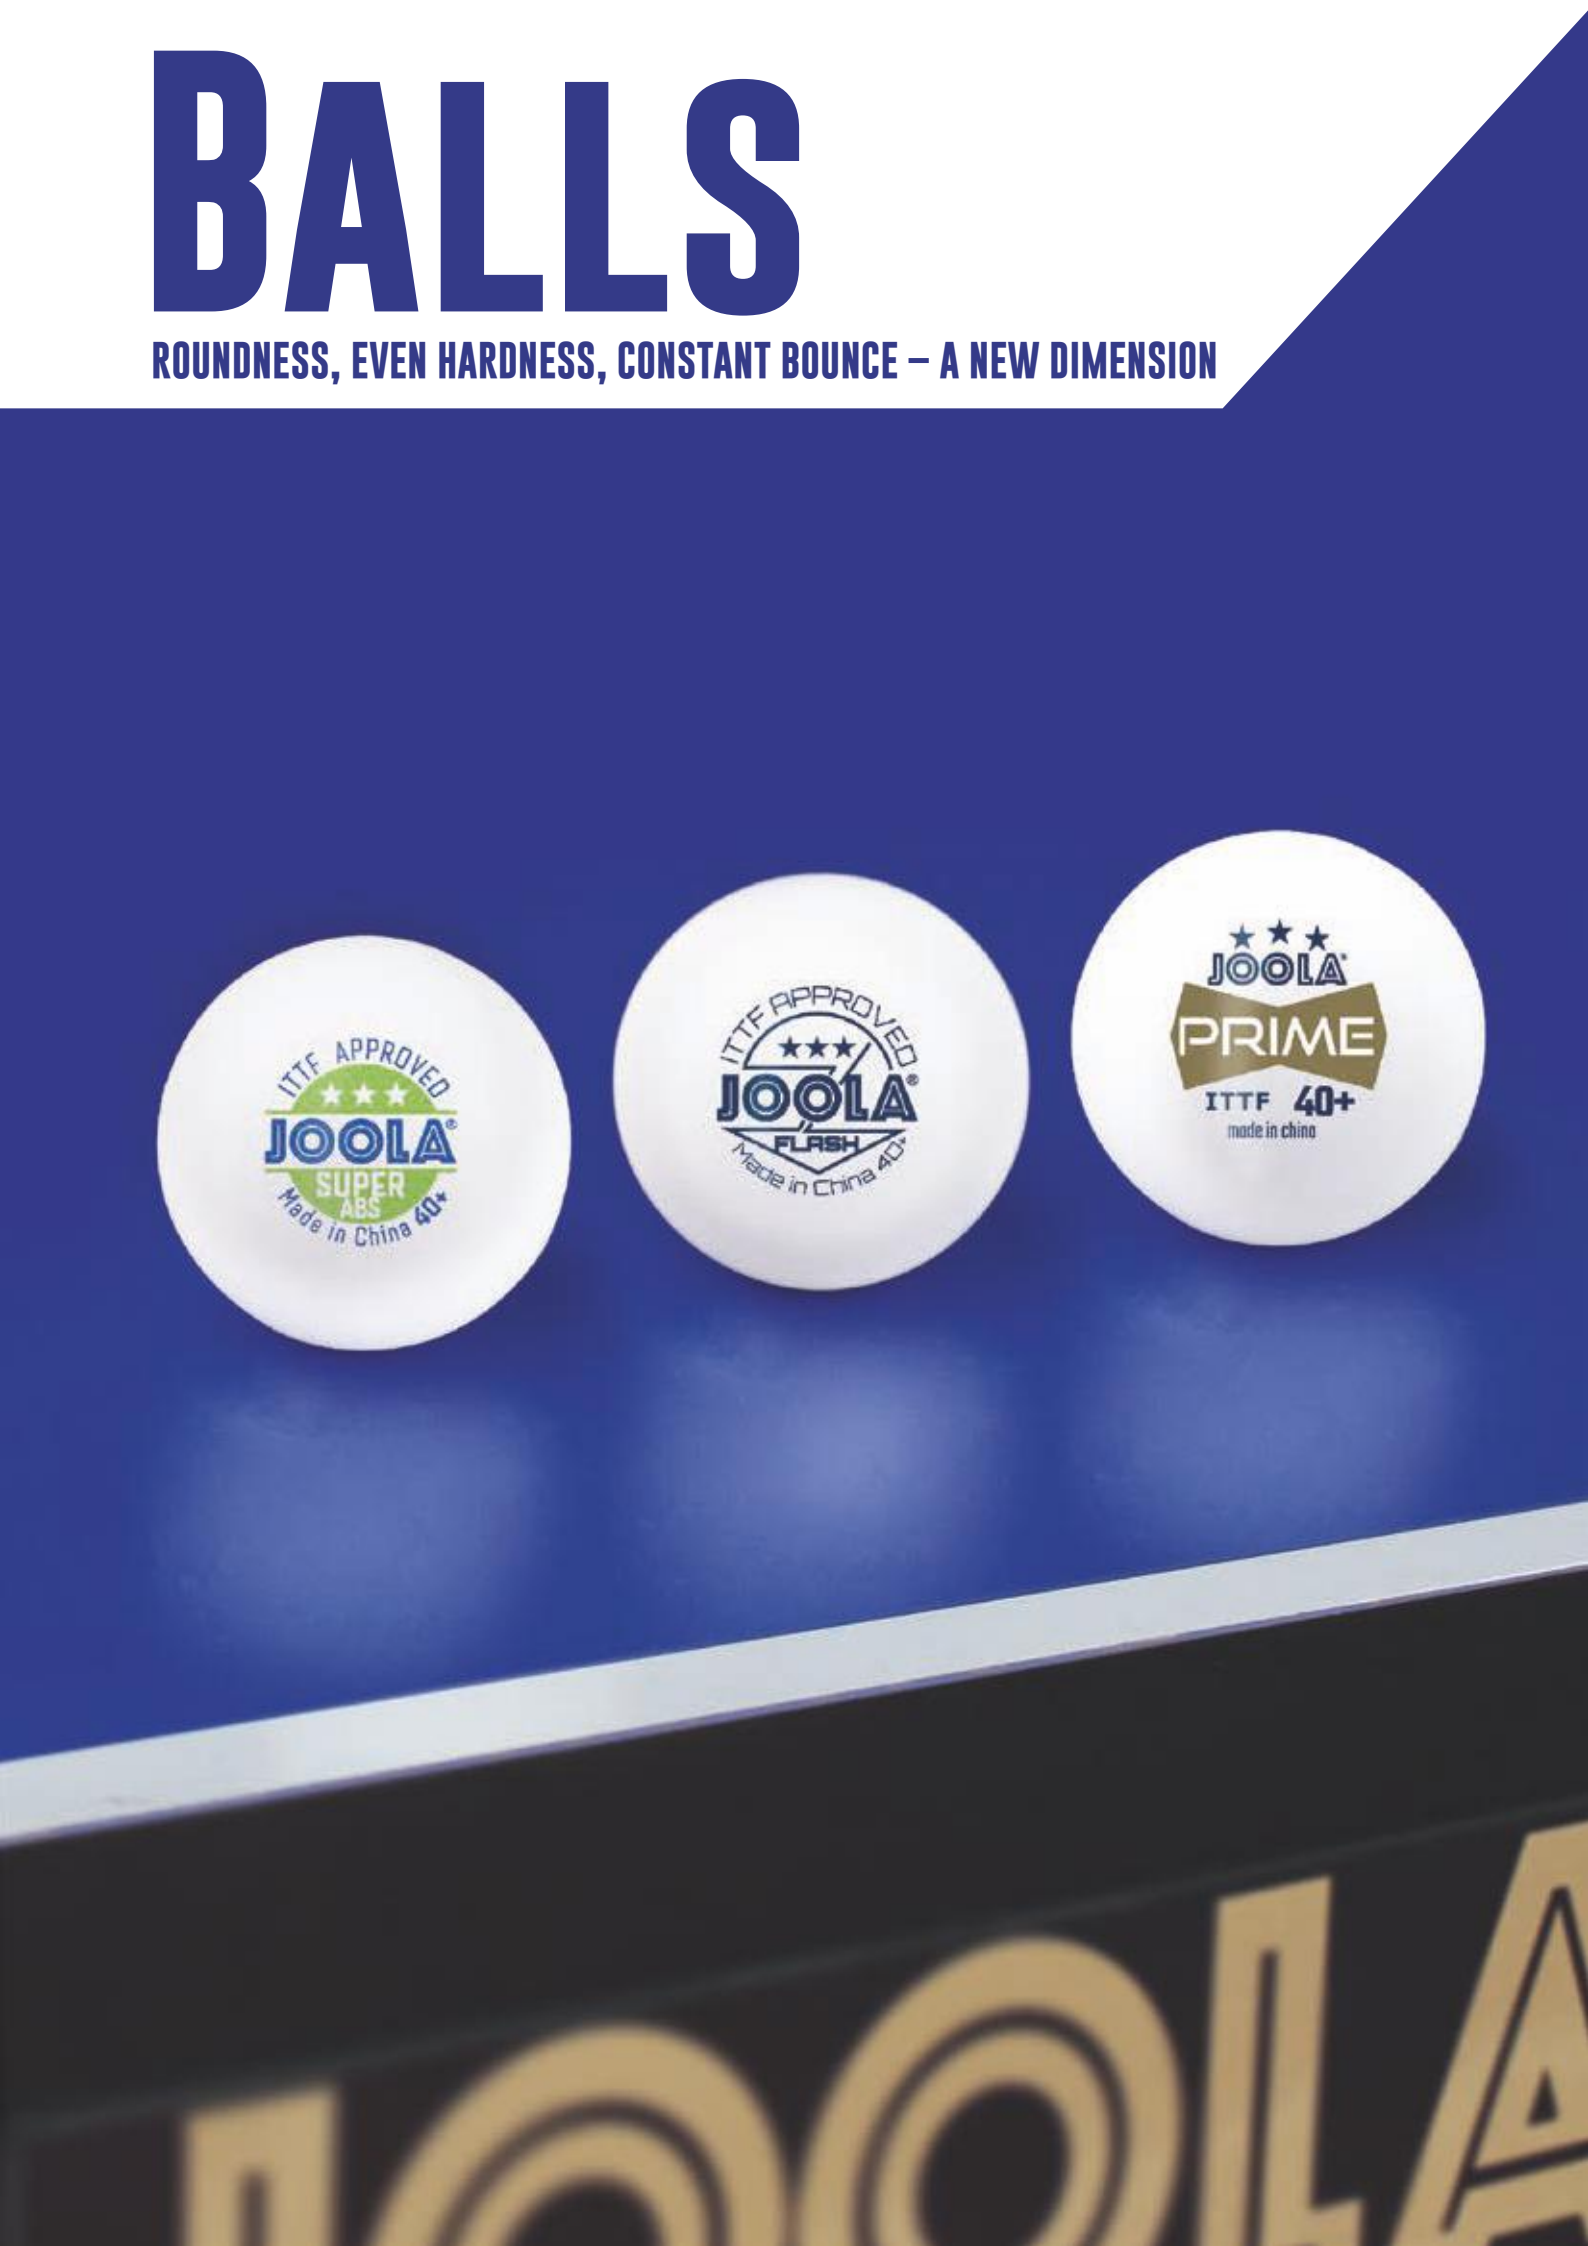
SUPER PBO-c
Optimised connection of the "PBO synthetic fibres" and carbon. Leads to maximum ball response, highest possible explosiveness and an enlarged sweet spot.

UDC – CONCEPT (Unidirectional Carbon Concept)
Unidirectional (parallel) to each other arranged carbon fibres, that are not interwoven with each other.

HTP – hinoki technology performance
Wood veneer of very high quality convinces with following features: sensitive, prolonged ball contact, high trajectory and maximum ball control..

BALLS

ROUNDNESS, EVEN HARDNESS, CONSTANT BOUNCE – A NEW DIMENSION



FLASH 40+ ***

The new production method for manufacture of the seamless JOOLA FLASH provides sensational playing features: an even bounce, stable flight, consistent spin and exceptional durability.

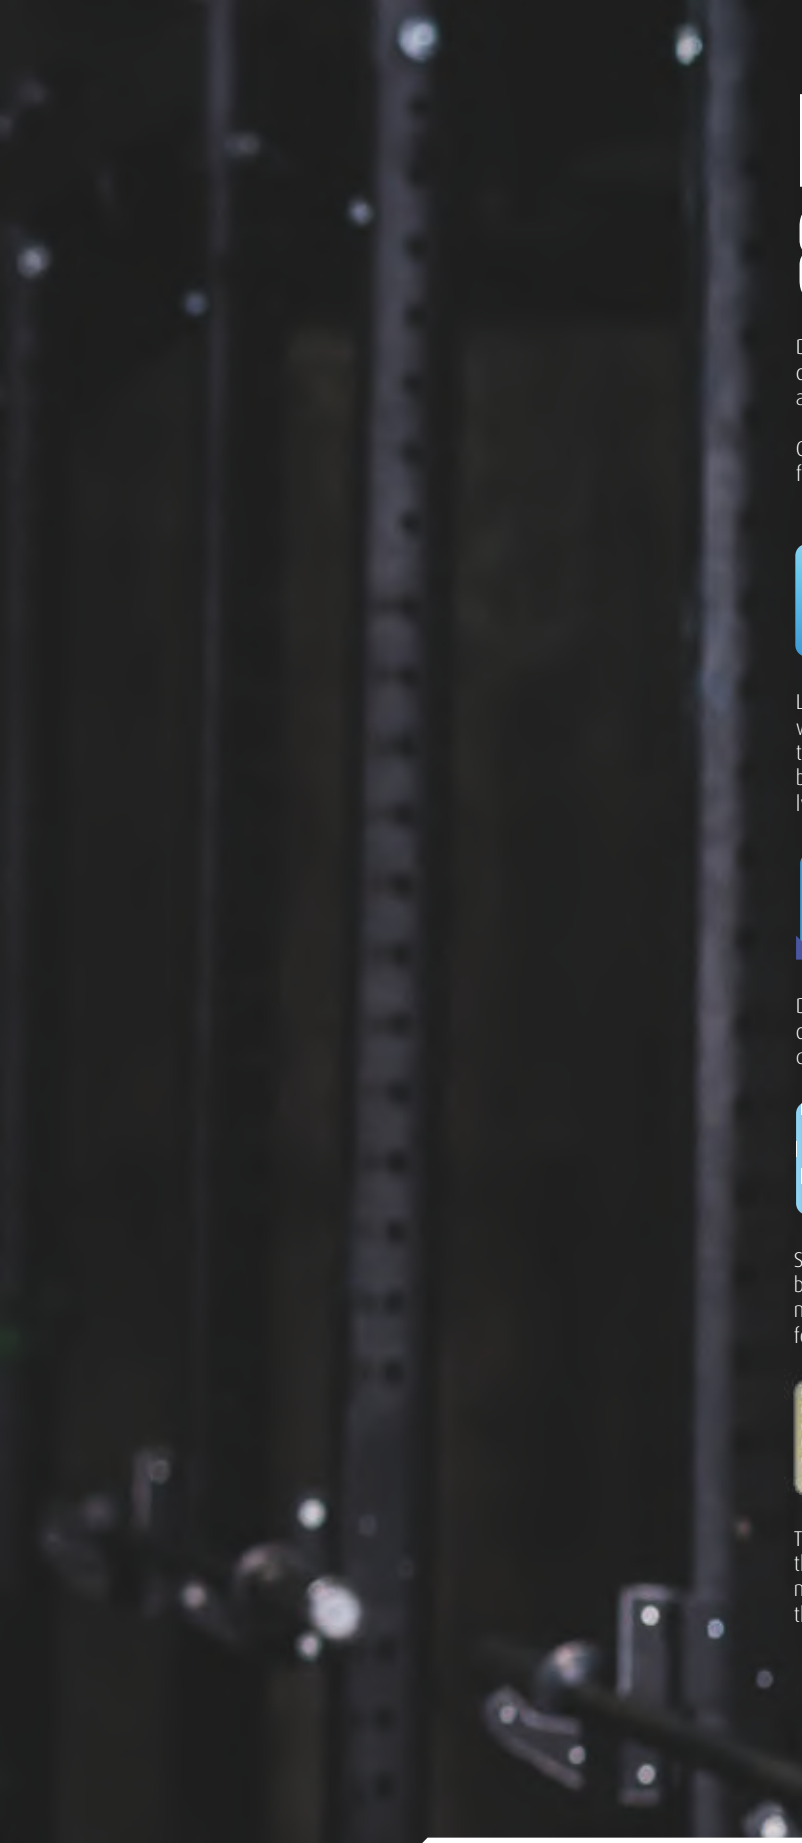
JOOLA



FUNCTIONALITY & DESIGN

Due to the sporty stress, table tennis clothing must be comfortable. We combine comfort & functionality, pleasant styles, highest durability with versatile design and quality.

Our diverse collection of team as well as individual designs and functional outfits for training or leisure offers the right choice for every requirement.

dryplay
„stay dry - play cool“

Lightweight, breathable functional fabric made of high-quality polyester fibres, which moisture away from the body to the outside of the tissue, thereby reducing the rapid evaporation of sweat. The result is a dry and performance-optimized body. The functional fibres, which are often strained by the sport, are also extremely robust and convince by a maximum pleasant wearing comfort.

elastofit

Due to the fibre composition, JOOLA competition textiles offer an excellent wearing comfort. The flexible stretch part ensures optimal seat and ensures optimum freedom of movement with table tennis-specific movements.

MESHTEX

Synthetic fibre netting consisting of small woven mesh characterized by high breathability due to the incorporation of microspots for air regulation. The JOOLA mesh fibres are also extremely flexible, lightweight, moisture-regulating and therefore ideally tailored to the needs of table tennis.

Sublimation

Textile printing process in which a special dye (sublimation ink) is transferred into the carrier by pressure and heat. The sublimation ink penetrates completely into the material, disturbing seams can be dispensed with. The material remains very light, the color is very detailed and above all stable.

SPORTSWEAR

Performance

- Dimensionally stable, high quality polyester fibres
- Fast drying of the functional fabric
- Comfortable cut
- Print of the club name possible

DYNAMIC
TRACTION
SOLE

BETTER TRACTION -
MORE MOVEMENT

SHOES

High-grip, extremely light shoe sole, specially produced for the TT high-performance sport, which enables fast movements on a wide variety of indoor floors.

NEXTT

JOOLA NexTT is designed for top table tennis and therefore tuned to the specific movement patterns of table tennis sports. In intensive co-operation with JOOLA top players, a shoe was developed that is comfortable to wear, supports legwork with directional changes and in addition impresses with modern and attractive design. Developed for highest demands the JOOLA NexTT is a gain for every ambitious table tennis player.

Colors: navy-lime, navy-orange

Sizes: 36 – 45 **89,90 €**

VIVID

VIVID

Stability, flexibility and grip.
Control the game with a table tennis shoe that gives you an outstanding playing feel. The new JOOLA VIVID has been adjusted to the specific requirements of table tennis with an attractive design and a choice of subtle colours.

- very lightweight and high-quality table tennis shoe
- ergonomic inner sole provide top comfort and support
- breathable mesh fabric inserts at front and sides
- extremely flexible and non-slip sole
- available in two colors

Color: petrol-lime

Sizes: 36 – 46 **79,90 €**

B-SWIFT

An absolute highlight among table tennis shoes. The modern and yet functional design is specifically tailored to the demands of top performance table tennis. The newly designed sole with incorporated, extremely soft speed absorbing components, perfectly transform even the fastest changes in movement and therefore help to implement the sensed playing situation to footwork.
The JOOLA top players Chen Weixing and Daniel Habesohn (European Champions doubles 2012) use this shoe.

Color: white-red

Sizes: 36 – 45 **74,90 €**

ATOLL

Specially designed for the requirements of elite table tennis, the high quality made JOOLA ATOLL is the ideal shoe for players with the highest demands. The breathable mesh fabric, as well as the extra soft, ergonomic inner sole provide a comfortable fit. The specifically for table tennis requirements developed MD/rubber sole convinces with good grip and enables an excellent sense of balance. The JOOLA ATOLL offers the best credentials for that, what good footwork in table tennis distinguishes: a stable stance and quick changes in direction!

Color: white-blue

Sizes: 36 – 46 **69,90 €**

RALLY

The top shoe from JOOLA for players of the highest standard. The uppers are made from breathable mesh and functional micro fibre which guarantees excellent breathability and comfort. In the sole the proven phylon material is used, making it very light and slip-resistant. The legendary EVA inner sole in combination with the new supination support prevents the foot from deviating outwards. The RALLY has been developed for the ambitious player demanding an extremely lightweight, non-slip and flexible table tennis shoe that also reduces heavy strain on the joints.

Color: white-blue

Sizes: 35 – 47 **52,90 €**

COURT

JOOLA COURT meets all requirements of modern table tennis. It is extremely lightweight and the flexible, grippy sole offers best support for all table tennis movements, e.g. a fast lunge or side steps. The soft inner sole supports the foot and the comfortable fit of the JOOLA COURT also provides high wearing comfort. A table tennis shoe for everybody at an attractive price.

Color: white-navy

Sizes: 36 - 46 **49,90 €**

TOUCH

The classic among table tennis shoes, Touch has been upgraded with a new appealing design. The sole, manufactured in the same way for many years, provides exceptional grip. The upper material has now been revised and the seams and design have been improved. Therefore, TOUCH is still the model for all leisure and club players.

Color: white-blue-red

Sizes: 36 – 46 **46,90 €**

PRO JUNIOR

The new PRO JUNIOR - a shoe specially designed for children, now featuring a new design with practical velcro fastenings!
The PRO JUNIOR has a non-slip sole that has been established for years. The EVA mid-sole protects children's joints from too much strain during the growth period. The extremely light shoe enables sudden direction changes and supports the natural movements of table tennis.

Color: white-blue

- double anti-tilting device
- low storage space
- corresponds with EN 14468-1 B

JOOLA Wettkampf Platte | 25 mm | 135 kg | 62x161 cm

blue, green **1095,00 €**

With the new GSC 25, JOOLA continues the production of tables with legendary JOOLA surfaces and a table top strength of 25 mm (as already known on the 5000 table). The 25 mm surface guarantees a 100% even ball bounce on every area of the playing surface – no skidding, quicker and higher ball bounce are a certainty, just as on every JOOLA competition table. The excellent playing feel gives players the confidence and makes this table a reliable partner for many clubs, sports centres and training academies.

The top model from the JOOLA product range also convinces due to it's unique, striking design. For the first time in the history of the sport of table tennis, an undercarriage has been designed in gold. In combination with the established blue surface, the GSC 25 has an extremely elegant appearance, that is rounded off when using the golden WM Ultra net.

25 mm | 133 kg | 64 x 175 cm
